## Notes:

1. The above series is that of "dues actually collected" - dues stamps sold each month in each district. It does not capture that percentage of active party members in dues arrears in any given month, which may be conceptualized as a relatively fixed number continually "rolling over" - with one set of members paying up their back dues at the same moment a new crop of tardy members moves into arrears; nor does it capture that percentage of unemployed party members making use of the "exempt" stamps to which they were entitled. Under party rules, District Organizers were entitled to apply for free "exempt" stamps in quantity of up to $10 \%$ of the dues stamps sold in the previous month. While it would be a minor mistake to assume that these figures should be mechanically adjusted $10 \%$ upwards to compensate for these exempt stamps, neither should these active party members be ignored. Be advised that this membership series, while official, nevertheless is an understatement of true party size.
2. The "number of party members on the books," containing the names of members who had long since dropped out of active participation, dead addresses, etc. is an entirely unsatisfactory measure of party size. Its use should be avoided by all serious scholars.
3. District 10, based in St. Louis and including the southern part of Illinois, as well as the states of Missouri, Kansas, and Nebraska, was merged with District 8, based in Chicago effective July 1, 1924.
